EDUCATION

The University of British Columbia

Vancouver, BC

Bachelor of Science in Computer Science and Math, GPA: 3.9/4.0

Expected Graduation: May 2027

- Coursework: software engineering, operating systems, networking, parallel computing, distributed systems.
- **1st Overall**, nwHacks 2026; Western Canada's largest hackathon and \$5,000+ total prizes
- **1st Overall**, Cursor Hackathon 2026; Clustly sponsor prize; \$1,000 total prizes

TECHNICAL SKILLS

Languages: C++, C, Go, TypeScript, Java, Rust, Python, SQL, MATLAB

Frameworks & Libraries: JAX, PyTorch, NumPy, Express, React, Playwright, Selenium

Technologies & Tools: CUDA, AWS, Kubernetes, Docker, Jenkins, Github Actions, Ansible, Linux, Git

EXPERIENCE

Amazon Web Services, Inc., *Software Engineer Intern*

May 2026 – present

- Leading design and development of Oracle Management Agent diagnostic tooling for Amazon RDS for Oracle.
- Provided R&D support by analyzing production issues and agent logs to resolve customer issues efficiently.

Amazon Web Services, Inc., *Software Engineer Intern*

May 2025 – Sept. 2025

- Led the integration of AWS Bedrock and RDS SQL Server, creating a natural way for users to use Bedrock in automated SQL Server pipelines, and shipped the feature on mainline behind a feature flag.
- Developed APIs in C# and Java for RDS IAM role integration and authentication to enable future AWS service integrations with SQL Server, eliminating multiple manual workflows.
- Wrote T-SQL scripts to monitor system tables and database metadata for feature usage and adoption metrics.
- Refactored internal developer tools for building and deployment to support new Windows programs and features.

Incognito Software Systems, *Software QA Engineer Intern*

Sept. 2024 – April 2025

- Developed 200+ tests in Java and TypeScript for multiple products, maintaining software and fixing 40+ bugs.
- Increased Jenkins pipeline uptime by 400% and reduced build times by 30% with a Docker-based architecture.
- Automated product deployment on Linux machines using Ansible playbooks, accelerating QA setup and testing.

University of British Columbia, *Undergraduate Teaching Assistant*

July 2024 – April 2025

- Led weekly labs for 90 students, earning a 4.9/5 average rating for engagement and overall quality of teaching.
- Guided 90+ students with developing event-driven Java, focusing on design, debugging, and core principles.
- Answered questions and lead weekly lecture activities and Q&A for 200+ students in large-section classes.

UBC Game Development Club, *Software Developer*

Oct. 2023 – Dec. 2023

- Designed and implemented a movement system and tile management system in Godot using C# and GDScript.
- Improved development workflow with UML diagrams, increasing efficiency and streamlining system structure.

PROJECTS

Rehabify | *Next.js, TypeScript, MediaPipe, WebAssembly, PostgreSQL, Gemini, Vapi* | rehabify.tech

- AI-powered physical therapy app with real-time form correction using webcam-based pose detection.
- Integrated Deepgram STT, Gemini, ElevenLabs TTS, and MediaPipe into real-time coaching pipeline.
- Owned session persistence and backend workflow, achieving sub-1s latency for coaching feedback.

Tower | *TypeScript, Python, SQLite, Raspberry Pi* | [github](https://github.com)

- Designed and implemented a distributed file synchronization and discovery tool for local networks.
- Utilizes a Raspberry Pi as a central server to auto save files and upload/download them automatically via a CLI.
- Server only holds metadata for efficient indexing, with device-specific SSH keys ensuring secure file transfer.

Simplified TCP Server | *C++, GDB, Make, Shell*

- Developed a TCP-like protocol using server with connection/disconnection handling and in-order packet delivery.
- Used C++ socket APIs to manage network communication across ports.
- Validated robustness via testing with GDB and shell scripts, with automated builds using Make.
